

## Course Specification

**Program on which the course is given:** Microbiology  
**Department offering the program:** Botany & Microbiology  
**Department offering the course:** Chemistry  
**Academic year:** 3<sup>rd</sup>      **Level:** 1<sup>st</sup>  
**Date of specification approval** 1/2016

-Course data		
<b>Code: Biochem 367</b>	<b>Course Title: Biochemistry</b>	<b>Academic year: 3<sup>rd</sup> year</b>
<b>Credit/ Taught Hours: Theoretical: Four Practical: Four</b>		<b>Level: 1<sup>st</sup></b>

<b>1- Course aim</b>	To enable the student to be oriented with the biochemical importance of macro- and micronutrients as well as the structure and functions of enzymes and vitamins
<b>2- Intended Learning Outcomes (ILOs):</b>	
<b>2.A- Knowledge and understandings:</b>	By the end of the course, students must be able to: a1. Explain the basic scientific facts, concepts and principles in chemical processes found within the microbial cells.
<b>2.B- Intellectual Skills:</b>	By the end of the course, students must be able to: b1. Use integrated approaches to evaluate, analyze, interpret in various subjects in biochemistry.
<b>2.C- Professional Skills:</b>	By the end of the course, students must be able to: c1. Use techniques and tools considering the scientific ethics. c2. Record and analyze experimental data, interpret their validity, apply statistical analyses and suggest further investigations. c3. Take effective notes and record experimental procedures and laboratory protocols.
<b>2.D- General Skills:</b>	By the end of the course, students must be able to: d1. Work in a group and communicate with others positively. d2. Maintain good records of laboratory work and of results.

<b>Theoretical part content</b>					
		<b>Topic</b>	<b>No. Hours</b>	<b>Lecture</b>	<b>Tutorial/Practical</b>
<b>3- Course content: (theoretical and then practical)</b>		3.1. The chemical structure, properties and reactions of: Carbohydrates, lipids, proteins and amino acids, nucleotides and nucleic acids.	<b>8hrs/week</b>	<b>4hrs/week</b>	<b>4hrs/week</b>
		3.2. Enzymes: definition, chemical nature, mechanism of action, factors affecting the rate of enzyme action, enzyme activators and inhibitors, and enzyme classification.			
		3.3. Vitamins: definition, classification, chemical structure, mechanism of action, biomedical importance and disturbances.			
<b>4- Teaching and learning methods:</b>		4.1. Lectures 4.2. Practical classes (small group teaching and practice of laboratory skills) 4.3. Biochemical laboratory report comments. 4.4. Small research project in certain topic to each group in lab. from the internet and available books in the library. 4.5. Discussion.			
<b>5- Students assessment:</b>					
<b>5.A- Assessment methods:</b>		<b>5.1.1. Written exam</b>	-To assess: Knowledge and Understanding - Intellectual Skills		
		<b>5.1.2. Oral exam</b>	-To assess: Knowledge and Understanding - Intellectual Skills		
		<b>5.1.3. Practical exam</b>	To assess: Professional and Practical Skills		
		<b>5.1.4. Attendance of students.</b>	To assess: General and Transferable Skills		

<b>5.B- Assessment schedule</b>	Assessment 1: <b>Quizzes</b> <b>Final written exam</b>	Week: every other week at the end of the term
	Assessment 2: <b>Oral exam</b> <b>Final oral exam</b>	Week: weekly at the end of the term
	Assessment 3: <b>Final practical exam</b>	Week: at the end of the term

<b>5.C- Assessments weights</b>	Semester work %	14 %
	Oral Examination %	6 %
	Practical Examination %	30 %
	Final Examination%	50 %
	Total %	100 %

## 6- List of Books and references

<b>6.A- Notes:</b>	Course Notes
<b>6.B- Essential books:</b>	
<b>6.C- Recommended books:</b>	Harper's Biochemistry (Murray, R. K. <i>et al.</i> , 2003) Biochemistry. An introduction (Mc Kee, T. and Mc Kee, J., )
<b>6.D- Scientific periodicals, websites ....etc</b>	

## 7- Facilities required for teaching and learning:

- Providing class rooms with multimedia system.
- Laboratory facilities (chemicals, kits and instruments) to perform the required experiments.

**Course coordinator:**  
**Asss. Prof. Mona Abd El-Gelel**

**Head of Department:**  
**Prof. Dr. Amal Salah**

Course data		
<b>Code: M301</b>	<b>Course Title: Microbial Physiology</b>	<b>Academic year: 3<sup>rd</sup> year</b>
<b>Credit/ Taught Hours: Theoretical: Two Practical: Two</b>		<b>Level: 1<sup>st</sup></b>

<b>1- Course aim</b>	The aim is to provide students of main concepts of physiology of different microorganisms, their nutritional, isolation, preservation, growth as well as metabolic activities.
<b>2- Intended Learning Outcomes (ILOs):</b>	
<b>2.A- Knowledge and understandings:</b>	By the end of the course, students must be able to: <b>a1.</b> Describe the theories and methods applied for interpreting and analyzing biological data. <b>a2.</b> Explain main concepts of biological life forms complexity, diversity and physiological, in the community and their relation to the environment. <b>a3.</b> Explain knowledge about diversity and evolution in diverse aspects of the field of microbiology.
<b>2.B- Intellectual Skills:</b>	By the end of the course, students must be able to: <b>b1.</b> Demonstrate independent logical thinking. <b>b2.</b> Solve problems, both individually and co-operatively.
<b>2.C- Professional Skills:</b>	By the end of the course, students must be able to: <b>c1.</b> Use techniques and tools considering the scientific ethics. <b>c2.</b> Apply the different methods used for preparing, processing, interpreting and presenting data for biological samples. <b>c3.</b> Carry out aseptic techniques such as isolate, culture, enumerate and identify a range of micro-organisms. <b>c4.</b> Record and analyze experimental data, interpret their validity, apply statistical analyses and suggest further investigations. <b>c5.</b> Take effective notes and record experimental procedures and

	laboratory protocols.																																																			
<b>2.D- General Skills:</b>	By the end of the course, students must be able to: <b>d1.</b> Meet deadlines and priorities workloads to achieve targets. <b>d2.</b> Overcome problems. <b>d3.</b> Maintain good records of laboratory work and of results.																																																			
<b>3- Course content: (theoretical and then practical)</b>	<b>Theoretical part content</b>

## Course Specification

**Program on which the course is given:** Microbiology  
**Department offering the program:** Botany & Microbiology  
**Department offering the course:** Botany and Microbiology  
**Academic year:** 3<sup>rd</sup>      **Level:** 1<sup>st</sup>  
**Date of specification approval** 1/2016

Course data		
<b>Code: M 302</b>	<b>Course Title: Mycology &amp; Plant Pathology</b>	<b>Academic year: 3<sup>rd</sup> year</b>
<b>Credit/ Taught Hours: Theoretical: Four Practical: Four</b>		<b>Level: 1<sup>st</sup></b>

<b>1- Course aim</b>	Deliver students with a broad understanding of the fundamental principles of microbiology emphasizing Mycology.
<b>2- Intended Learning Outcomes (ILOs):</b>	
<b>2.A- Knowledge and understandings:</b>	By the end of the course, students must be able to: <b>a1.</b> Define terminology, nomenclature and classification system in microbiology and related subjects in Botany. <b>a2.</b> Explain main concepts of biological life forms complexity, diversity, molecular, cytological, morphological, physiological, genetical from unicellular to complex organism in the community and their relation to the environment.
<b>2.B- Intellectual Skills:</b>	By the end of the course, students must be able to: <b>b1.</b> Conduct a report on an independent project.
<b>2.C- Professional Skills:</b>	By the end of the course, students must be able to: <b>c1.</b> Use techniques and tools considering the scientific ethics. <b>c2.</b> Use the scientific literature correctly and effectively by collecting research topic in one field to write research reports and essay.
<b>2.D- General Skills:</b>	By the end of the course, students must be able to: <b>d1.</b> Overcome problems. <b>d2.</b> Locate information from a wide range of sources and extract, collect and present that information in an appropriate form and use IT effectively.

3- Course content: (theoretical and then practical)	Practical part content					
	Topic	No. of Hours 8hrs/week	Lectures. 4hrs/week	Practical 4hrs/week		
	Division: Gymnomycota Genus: <i>Arcyria, Stemonitis, Dictydium, Ceratiomyxa.</i>	k				
	Division: Mastigomycota Genus: <i>S. endobioticum, Allomyces macrogynus, Plasmodiophora brassica</i>					
	<i>Saprolegnia sp., Albugo candida, Plasmopara viticola, Peronospora parasitica, Bremia lactucae</i>					
	Division: Amastigomycota Genus: <i>Rizopus, Mucor, Cunninghamella, Shizosaccharomyces, Saccharomyces cerevisiae</i>					
	<i>Taphrina deformans, Aspergillus, Penicillium, Erysiphe</i>					
	<i>Podospheera, Uncinula, Sordaria</i>					
	<i>Claviceps purpuria, Peziza vesiclosa</i>					
	<i>Agaicus</i>					
	Loose smuts of creals <i>Ustilago tritici, Ustilago nuda</i>					
	Covered smut of cereals <i>Ustilago hordei, Ustilago maydis, Tilletia caries</i>					
	<i>Puccinia graminis</i>					
	<i>Alternaria solani, Fusarium</i>					
	Revision					
4- Teaching and learning methods:	Light microscopes Readymade slides for systematic fungi Infected Plant tissues with fungi Slides and Coverslips Projector					

<b>5- Students assessment:</b>	
<b>5.A- Assessment methods:</b>	<ul style="list-style-type: none"> <li>-Oral presentation to assess their understanding.</li> <li>- Projects to assess their abilities to obtain information.</li> <li>- Oral exams to assess their understanding.</li> <li>-Writing exam.</li> <li>- Practical exam</li> </ul>

<b>Code:</b> M306	<b>Course Title: Environmental Pollution</b>	<b>Academic year: 3<sup>rd</sup></b>
<b>Credit/ Taught Hours: Theoretical: Two Practical: Two</b>		<b>Level: 1<sup>st</sup></b>

<b>1- Course aim</b>	Deliver students with a broad understanding of the fundamental principles of microbial pollution and its role in our daily life.
<b>2- Intended Learning Outcomes (ILOs):</b> By the end of the course, students must be able to:	
<b>2.A- Knowledge and understandings:</b>	By the end of the course, students must be able to: <b>a1.</b> Describe the theories and methods applied for interpreting and analyzing biological data. <b>a2.</b> Illustrate interaction of pollutants with soil, water and air.
<b>2.B- Intellectual Skills:</b>	By the end of the course, students must be able to: <b>b1.</b> Conduct a report on an independent project. <b>b2.</b> Analyze published information in microbiology; and formulate hypotheses with the minimum of assistance.
<b>2.C- Professional Skills:</b>	By the end of the course, students must be able to: <b>c1.</b> Use techniques and tools considering the scientific ethics. <b>c2.</b> Apply the different methods used for preparing, processing, interpreting and presenting data for biological samples. <b>c3.</b> Take effective notes and record experimental procedures and laboratory protocols.
<b>2.D- General Skills:</b>	By the end of the course, students must be able to: <b>d1.</b> Use scientific models, systems, and tools effectively. <b>d2.</b> Meet deadlines and priorities workloads to achieve targets.

**3- Course content:  
(theoretical and  
then practical)**

<b>Theoretical part content</b>			
<b>Topic</b>	<b>No. of Hours</b>	<b>Lectures</b>	<b>Practical</b>
	<b>4hrs/w week</b>	<b>2hrs/week</b>	<b>2hrs/week</b>
Introduction. Air pollution, types of air pollution (source, effects): carbon monoxide, carbon dioxide, sulphure oxides, nitrogen oxides, particulate matters. Acid rains. Controlling air pollution.			
-Water pollution, major water pollutants, industrial wastewater, thermal pollution, oil spills, agricultural wastewater, sewage, wastewater treatment.			
-Soil pollution, classes of herbicides problems of herbicides, fungicides and insecticides. Control of soil pollution.			
-Noise pollution (source, effects) and pollution due radiation (source, effects).			
Microbial toxins in the environment			
Bacterial toxins			
Algal toxins			
Corrosion			
Acid main drainage			
Metals and toxins			
Bacterial disease			
Revision + Exam			

<b>Practical part content</b>	
<b>Topic</b>	
Microbial toxins in the environment	
Bacterial toxins	
Algal toxins	
Corrosion	
Acid main drainage	
Multiple tube fermentation method for bacteria analysis of water	
Antibiotics	
Effect of inhibitors on microbial growth	
Phosphatase test	
Rusting of iron	
Mushrooms (Toxins)	
Cyanobacteria + Algae (Toxins)	
Pictures	
Revision + exam

## Course Specification

**Program on which the course is given:** Microbiology  
**Department offering the program:** Botany & Microbiology  
**Department offering the course:** Mathematics  
**Academic year:** 3<sup>rd</sup>      **Level:** 1<sup>st</sup>  
**Date of specification approval** 1/2016

Course data		
<b>Code:</b> MA 381	<b>Course Title:</b> Applied Statistics	<b>Academic year:</b> 3 <sup>rd</sup>
<b>Credit/ Taught Hours:</b> <b>Theoretical: Two</b> <b>Exercise: Two</b>		<b>Level:</b> 1 <sup>st</sup>

<b>1- Course aim</b>	By the end of the course, the student will be able to: <ul style="list-style-type: none"> <li>● Build a background and basic knowledge in the field of applied statistics.</li> </ul>
<b>2- Intended Learning Outcomes (ILOs):</b>	
<b>2.A- Knowledge and understandings:</b>	By the end of the course, students must be able to: a1. Explain the concept of probability and how to handle using methods and theory of probability for calculating different probabilistic problems in biology. a2. Explain the relation between the studied topics and the environment.
<b>2.B- Intellectual Skills:</b>	By the end of the course, students must be able to: b1. Demonstrate independent logical thinking. b2. Use integrated approaches to evaluate, analyze, interpret in various subjects in Microbiology. b3. Solve problems, both individually and co-operatively.
<b>2.C- Professional Skills:</b>	By the end of the course, students must be able to: c1. Collect, analyze, and present data using appropriate formats and techniques.

<b>2.D- General Skills:</b>	<p>By the end of the course, students must be able to:</p> <p>d1. Overcome problems.</p> <p>d2. Locate information from a wide range of sources and extract, collect and present that information in an appropriate form and use IT effectively.</p> <p>d3. Assess the relevance and importance of ideas of others.</p>
-----------------------------	---

<b>3- Course content: (theoretical)</b>	<b>Theoretical part content</b>			
	Topics	No. of Hours	Lectures.	Exercise
		4hrs/week	2hrs/week	2hrs/week
	Collection and organization of data- Frequency tables - histogram – Polygon and curves.			k
	Measures of central tendency such as , mean, median and mode in both grouped or ungrouped data			
	Measures of dispersion such as rang range –variance, standard deviation and coefficient of variation.			
	Sample space,event, the probability of the event –axioms of probabilities some simple results of probabilities			
	Conditional and total probabilities – Bayes theorem			
	Random variables and their types-cumulative distribution-expected values – variance			
	Some discrete distributions as Bernoulli binomial and Poisson and their properties.			
	Some continuous distributions Such as normal, F,T, and $\sigma$ and their properties.			
	Regression and correlation coefficient.			

<b>4- Teaching and learning methods:</b>	<p>(4)1- Lectures</p> <p>(4)2- discussion sessions</p> <p>(4)3-Tutorial Sections for solving exercises and applications.</p>
--	--

<b>5- Students assessment:</b>	
<b>5.A- Assessment methods:</b>	<p>(5)1- Mid-Term exam to assess the ability of understanding and thinking of course material</p> <p>(5)2- Oral exam to assess their confidence and understanding the scientific materials</p> <p>(5)3- Discussions during the lectures to assess their ability of understanding</p> <p>(5)4- Final comprehensive Exam to assess knowledge of course material</p>
<b>5.B- Assessment schedule</b>	<p>Assessment 1 Practical examination 14<sup>th</sup> Week</p> <p>Assessment 2 Final-term examination Week according to faculty's exam schedule</p>
<b>5.C- Assessments weights</b>	<ul style="list-style-type: none"> <li>• <b>Semester work</b> <b>14% (14/100)</b></li> <li>• <b>Oral Exam</b> <b>6% (6/100)</b></li> <li>• <b>Final-Term Exam.</b> <b>80% (80/100)</b></li> <li>• <b>Total</b> <b>100% (100/100)</b></li> </ul>

## Course Specification

**Program on which the course is given:** Microbiology  
**Department offering the program:** Botany & Microbiology  
**Department offering the course:** Botany and Microbiology  
**Academic year:** 3<sup>rd</sup>      **Level:** 2<sup>nd</sup>  
**Date of specification approval** 1/2016

-Course data		
<b>Code: M 303</b>	<b>Course Title: Systematic bacteriology</b>	<b>Academic year: 3<sup>rd</sup></b>
<b>Credit/ Taught Hours: Theoretical: Two Practical: Two</b>		<b>Level: 2<sup>nd</sup></b>

<b>1- Course aim</b>	Provide students with the main concepts of systematic bacteriology.
<b>2- Intended Learning Outcomes (ILOs):</b>	
<b>2.A- Knowledge and understandings:</b>	By the end of the course, students must be able to: <b>a1.</b> Define terminology, nomenclature and classification system in microbiology and related subjects in Botany. <b>a2.</b> Discuss essential facts, major concepts and fundamental principles in Microbiology emphasizing Fungi, Bacteriology, Archea, and Virology.
<b>2.B- Intellectual Skills:</b>	By the end of the course, students must be able to: <b>b1.</b> Use integrated approaches to evaluate, analyze, interpret in various subjects in Microbiology. <b>b2.</b> Solve problems, both individually and co-operatively.
<b>2.C- Professional Skills:</b>	By the end of the course, students must be able to: <b>c1.</b> Use techniques and tools considering the scientific ethics. <b>c2.</b> Carry out aseptic techniques such as isolate, culture, enumerate and identify a range of micro-organisms. <b>c3.</b> Take effective notes and record experimental procedures and laboratory protocols.
<b>2.D- General Skills:</b>	By the end of the course, students must be able to: <b>d1.</b> Meet deadlines and priorities workloads to achieve targets. <b>d2.</b> Locate information from a wide range of sources and extract, collect and present that information in an appropriate form and use IT effectively.

<b>3- Course content: (theoretical and then practical)</b>	<b>Theoretical part content</b>			
	<b>Topic</b>	<b>No. of Hours</b>	<b>Lecture(s)</b>	<b>Practical</b>
	Introduction	4hrs/week	2hrs/week	2hrs/week
	Classification of Prokaryotes			
	History of bacterial taxonomy			
	Bacterial division (parts & sections)			
	<b>Practical part content</b>			
	<b>Topic</b>			
	Isolation of bacteria from air			
	Relation between total bacterial count and time of exposure both in door and out door Indoor air ( from air ) Outdoor air ( the atmosphere )			
	Studying the morphological characters of bacterial colonies			
	Studying the purity of bacterial colonies by simple stain technique			
	* Examination and differentiation between bacterial species by Gram stain			
	*Negative stain *Spore stain			
	*flagella stain *Capsule stain			
Physiological test Decomposition of carbohydrates Hydrolysis of starch Decomposition of cellulose.				
Carbohydrate fermentation by bacteria. Decomposition of lipid Decomposition of protein ( Gelatin and casein)				
Decomposition of uric acid by uricolytic bacteria - Decomposition of urea . Citrate utilization - Indole production from Tryptophane				
Nitrate reduction test - Bacterial nodules				
Hydrogen sulphide production- Catalase enzyme test				
<b>4- Teaching and learning methods:</b>	<b>Theoretical explanation</b> <b>Practical experiments</b> <b>Microscopic examination</b> <b>Discussions</b>			
<b>5- Students assessment:</b>				
<b>5.A- Assessment methods:</b>	1. Theoretical examination to assess their understanding each lecture 2. Oral examination to assess the level of student understanding. 3. Practical exam to assess their ability to pure microbial preparation under sterile conditions.			
<b>5.B- Assessment schedule</b>	Assessment 1 Practical examination	14 <sup>th</sup> Week		
	Assessment 2 Final-term examination	Week	according to faculty's exam schedule	

<b>5.C- Assessments weights</b>	Semester work 14% Oral exam 6% Final Practical exam 30% Final Exam 50%
<b>6- List of Books and references</b>	
<b>6.A- Notes:</b>	
<b>6.B- Essential books:</b>	
<b>6.C- Recommended books:</b>	Bergy's manual of determinative bacteriology different volumes and editions. Practical and theoretical.
<b>6.D- Scientific periodicals, websites ....etc</b>	Periodicals, web sites.....etc. <a href="http://www.rpiedu/@hotmail">http://www.rpiedu/@hotmail</a> . <a href="http://www.ag.ohiostate.eau@hotmail">http://www.ag.ohiostate.eau@hotmail</a> .

<b>Code:</b> M304	<b>Course Title:</b> Virology	<b>Academic year:</b> 3 <sup>rd</sup>
<b>Credit/ Taught Hours:</b> <b>Theoretical: Two</b> <b>Practical: Two</b>		<b>Level:</b> 2 <sup>nd</sup>

<b>1- Course aim</b>	To deliver students with a broad understanding of the fundamental principles Virology and its role in our daily life
<b>2- Intended Learning Outcomes (ILOs):</b>	
<b>2.A- Knowledge and understandings:</b>	By the end of the course, students must be able to: <b>a1.</b> Define terminology, nomenclature and classification system in microbiology and related subjects in Botany. <b>a2.</b> Explain main concepts of biological life forms complexity, diversity, molecular, cytological, morphological, physiological, genetical from unicellular to complex organism in the community and their relation to the environment. <b>a3.</b> Discuss essential facts, major concepts and fundamental principles in Microbiology emphasizing Fungi, Bacteriology, Archea, and Virology.
<b>2.B- Intellectual Skills:</b>	By the end of the course, students must be able to: <b>b1.</b> Demonstrate independent logical thinking. <b>b2.</b> Solve problems, both individually and co-operatively.
<b>2.C- Professional Skills:</b>	By the end of the course, students must be able to: <b>c1.</b> Use techniques and tools considering the scientific ethics. <b>c2.</b> Carry out aseptic techniques such as isolate, culture, enumerate and identify a range of micro-organisms. <b>c3.</b> Record and analyze experimental data, interpret their validity, apply statistical analyses and suggest further investigations.
<b>2.D- General Skills:</b>	By the end of the course, students must be able to: <b>d1.</b> Meet deadlines and priorities workloads to achieve targets. <b>d2.</b> Overcome problems.

	<b>d3.</b> Maintain good records of laboratory work and of results.			
<b>3- Course content: (theoretical and then practical)</b>	<b>Theoretical part content</b>			
	<b>Topic</b>	<b>No. of Hours</b>	<b>Lectures</b>	<b>Practical</b>
		4hrs/week	2hrs/week	2hrs/week
	1-History of virology. 2-Morphology of viruses.			
	3-Biochemistry of viruses.			
	4-Classification and nomenclature of viruses.			
	5-Replication of bacterial viruses. 6-Replication of animal viruses. 7-Replication of plant viruses.			
	8-Transmission of viruses. 9-Virus like agent.			
	10 -Control of viral diseases. 11-Use of viruses as biological control.			
	<b>Practical part content</b>			
	<b>Topic</b>			
	1-Viral lab precautions.			
	2-Symptomatology			
	3-Transmission of viruses			
	3-1-Mechanical transmission			
	3-2-Insect transmission			
	4-Physical properties of the viruses:			
4-1-Dilution end point.				
4-2-Thermal inactivation point.				
4-3-Longivity				
5-Cultivation of animal viruses				
6-Purification of virus				
7-Morphology of bacterial, animal, and plant viruses.				
8-Ebola virus				
Revision				
<b>4- Teaching and learning methods:</b>	1-Classroom lectures. 2-Practical lessons. 3-Seminars.			

	4- challenges
<b>-Teaching and learning methods for limited capability students:</b>	1-Simplifid applications.
<b>5- Students assessment:</b>	
<b>5.A- Assessment methods:</b>

<b>3- Course content: (theoretical and then practical)</b>	<b>Theoretical part content</b>			
	Topic	No. of Hours	Lectures	Practical
	-What Are Actinomycetes? -Relation of Actinomycetes to Bacteria and Fungi.	4hrs/ week	2hrs/ week	2hrs/ week
	- Distribution of Actinomycetes. - Actinomycetes colonial morphologies.			
	-Identification of actinomycetes: a) Molecular Approach. b) Chemotaxonomical Approach. c) Classical Approach. d) Numerical Taxonomic Approach. - Preservation.			
	- Generic groups of actinomycetes: - Nocardioform actinomycetes.			
	- Actinomycetes with Multilocular Sporangia. - Actinoplanetes			
	<i>Streptomyces</i> and Related Genera. - Maduromycetes			
	<i>Thermonospora</i> and Related Genera. Thermoactinomycetes. - Other Genera.			
	- Practical Significance. - Human infection of actinomycetes			
	Revision			
	<b>Practical part content</b>			
	Topic			
	-Screening and isolation of actinomycete colonies from different sources.			
	-Morphological studies by using cover slip technique.			
-culture characteristics of the actinomycete isolates on ISP media.				
-melanin production by ISP NO. 6				
-melanin production by ISP NO. 7				
-melanin production by ISP NO.1				
-Utilization of carbon sources.				
-Tolerance to different conc, of NaCL.				
-Effect of different PH values and incubation temperatures.				
-Antibiotics resistance and revision.				
<b>4- Teaching and learning methods:</b>	<ul style="list-style-type: none"> <li>• Classroom literatures.</li> <li>• Discussion of subjects with students.</li> <li>• Illustrations, photographs, and/or animation to help visual learner</li> <li>• Studying some literatures on the internet.</li> </ul>
